TECHNICAL INSTALLATION GUIDE

Signposts are an important feature of any well planned street, nature reserve and general public places and provide information or direction to those that need them. Plaswood signs have attained a high level of credibility over a number of years and have proven to be the 'green alternative' to timber, metal and concrete signs.

Finger Post Installation

An average below ground depth of 650mm leaving enough space, approximately the width of the post, either side of where the post is to be placed. As the hole is excavated, remove any stones, then fill with concrete and thoroughly compact around the base of the post. Long nails or metal pegs could be used to key the post into the concrete.

This will also aid stability. It is recommended that finger posts are installed to a maximum height of 2.5 metres above ground level.

The fingers should be mortised into the post, three quarter through, and then glued and secured with two dowels.

Additional Options

All posts can have either flat, bevelled or chamfered tops which enhance the finish of the signs product. Corporate logos can also be added, along with various text and font styles.

We also offer Waymarker Posts, Street Name Plates, Information Boards, Management Posts, Nature Reserve Signs, Nature Trail Signs and Roundabout Sponsorship Signs, which are all suitable for any outdoor environment.

General Notes

Plaswood signs have attained a high level of credibility over a number of years and have proven to be the 'green alternative' to timber, metal and concrete signs. They need little or no maintenance and have no scrap value, which are assets in themselves with the vandal problems experienced in many areas.

Finger Posts

Sections used 100mm square, for the post and 30mm x 100mm or 150mm for the fingers.

Fingers are routed out with any text requirement, to one or both sides and will be recessed into the post. Symbols, as with Waymarker Posts, can also be included within the text. These items are delivered in flat pack form to prevent any damage.
